If you want a like-for-like camera swap, the **AKASO EK7000 Pro 4K Action Camera** is the closest match. It sits at almost the same price as the main EK7000 bundle, but adds a touch screen, electronic image stabilisation, adjustable view angle, and a claimed 40m waterproof rating. That makes it the better pick if you're filming bumpy paddleboard sessions, boat trips, or fast-moving action where smoother footage matters. What's better: more modern controls and stronger in-camera stabilisation. What's worse: it's still an entry-level action camera, so don't expect flagship low-light performance. Choose this if you want the same budget-friendly feel as the EK7000 but with a few extra usability upgrades.

If your priority is staying safe and comfortable on the water rather than filming it, the **Helly Hansen Rider Vest Buoyancy Aid** is a very different but very relevant alternative. Available in 60–70 kg and 70–90 kg versions, it's cheaper than the camera and rated highly. Compared with the AKASO, it obviously won't record a thing, but it's a far more practical purchase for UK watersports if you're paddling in cold conditions, crossing a windy estuary, or heading out on a dinghy. What's better: flotation, safety, and peace of mind. What's worse: it's not a tech product and won't help you capture memories. Choose this instead if you already have a camera and need the kit that actually keeps you afloat.

The **Osprey Men's Osp M Origin Shorty Wetsuit** is another strong alternative for people searching this camera because they're really building out their watersports setup. At £39.99, it's cheaper than the AKASO and ideal for warmer months when you still want a bit of insulation for SUP, kayaking, or surf practice. Compared with the camera, it's all about comfort and warmth rather than content creation. What's better: it helps extend your season and makes choppy sessions more comfortable. What's worse: it's only a shorty, so it won't be enough for colder spring or autumn UK water. Pick this if you're more likely to be on the water than behind the lens.

For colder British conditions, the **Osprey Men’s Osp Lng 5mm Origin Full Length Wetsuit** is the more serious option. It costs more than the AKASO EK7000, but it’s built for colder water, which is often the bigger issue from late autumn through early spring in the UK. Compared with the camera, it offers no filming features, but it delivers far more value if you’re trying to stay out longer in chilly coastal or inland waters. What’s better: warmth, coverage, and longer sessions in cold water. What’s worse: higher price and less flexibility in warm weather. Choose this if you’re prioritising comfort and safety over gadgets.

Overall, the best alternative depends on what you actually need from your session. If you want the closest camera upgrade, go for the EK7000 Pro. If you want to improve your watersports setup, the buoyancy aid or wetsuits may be the smarter buy than another action cam altogether.

Still Buy the Original If...

The original AKASO EK7000 is still a solid choice if you want a cheap, simple waterproof action camera with a decent accessory bundle and don’t need touchscreen controls or advanced stabilisation. It’s especially good if you’re capturing casual paddleboard, kayak, or holiday footage on a budget.
